

## Introduction

Progressbar is a very simple plug-in for Wordpress that adds a customizable progress bar to your post. Multiple progress bars in a post are supported and progress bars can be completely styled using CSS.

## How to use Progressbar

After downloading, unzipping and copying the qixis-progressbar.php to Wordpress' plug-ins folder (wp-content/plugins), activate the plug-in using the Wordpress administration panel. When the plug-in is activated it scans all posts for the tag '<progressbar ...>' and inserts a progress bar in its place. Multiple progress bars per post are supported.

### Parameters

The progressbar tag requires a few parameters. If these parameters are not given, some sensible default values are used. The following parameters are supported:

- width: The width of the progress bar in pixels. Defaults to 300.
- height: The height of the bar part of the progress bar, in pixels. Defaults to 41.
- background: The CSS class name of the progress bar's container div. Defaults to 'progressbar\_back'.
- bar: The CSS class name of the progress bar's background div. Defaults to 'progressbar\_bar'.
- fill: The CSS class name of the progress bar's 'progress' div. Defaults to 'progressbar\_fill'.
- complete: The percentage of progress that has been made. Defaults to '50'.

### Example

```
<progressbar width:300 height:35 background:pb_back  
    bar:pb_bar fill:pb_fill complete:35>
```

This gives a progress bar that could look like this, when properly styled using CSS:

### Styling

The progress bar sample in the image above has been styled using background images for the used div elements. The CSS code looks like this:

```
.pb_back  
{  
    text-align: center;  
    font-size: 0.5em;  
}
```

```
.pb_bar
{
    background-image: url('/forumpics/site/gray.png');
}

.pb_fill
{
    background-image: url('/forumpics/site/red.png');
}
```

Of course, since ordinary divs are used, your imagination is the only limit...

## Nice, where can I get it?

The plug-in and the images used for styling it as shown in the sample can be found at:
